

will be seriously damaged.

In near future, Exploitation of 1000 Canadian daughters imported to Golestan province

“Taknam” Company is a specialized, experienced poult-farm that has imported 1000 heads of daughters from Canada by supporting of Canadian Animal husbandry union.

This farm highly differs from other ones, for its major goal is exactly embryogeny notonly to maintain needs of Golestan province poultry farms, but also our Country entirely.

It`s about 40 years, it`s ownerfarms are engaging with raising cow cattles, using source of genetics, and Holeshtaine breeding generation.

The manager and investor of this successful farm explains: “Because of small-period life breeds, high usage of forage, low production, low rate of yield, we face with high prices of meat and milk.

But these imported Cattles have high longevity and their economical productions, causes prices declining”.

“One of our major plannings in breeding phase is knowing the latest technical events and innovations all around the world. We are Continiously co-operating with Canadian Cattle experts who repeatedly visit our grand farm”, He told.

Granting Cooperative Cashes to raw milk A need for have a healthy and powerful society

Along with execution of Aiming cooperative laws, all dairy productive factories, semi- industrial poultries, traditional producers believe that necessarily the Cooperative cashes should be granted to raw milk.

In their opinion if our state specifys cash budgets perkilo of raw milk, then we face with declining prices of goods. And also this operation causes higher production which compensates lack of production vacancies and lastly reduces the final expenses. We know that 70 percent of total expenses belong to raw milk purchasing, though having 100 percent increasing in remained percentage, never increases dairy product`s prices so much.

Traditional or Industrial animal husbandry, which one?

In this article, Mr. Mansour Ansari, the editorial n chief of “Damparvaran” as previous issues, analyses situation of milk and meat productive units. More than 50 percent of these products belong to semi-industrial, traditional poult- farms, in rural regions of Iran. while these people have no surplus more than their usage.

Our state meets two major problems, the first: Considering a replacement of 50 percent for rural people who have low incomes. The second, the state has to support these group to compete with cellular hungriness and supporting their purchase power increasing.

Besides our state should specify more budgets for these people`s training. The people whose goods are only for their own usage and their activities are ratherly economical.

Ministry of jihad-e-agriculture: The National developement fund specifies 5000 milliard tomman to agricultural sectors

Mr. S. Khalilian told: “1300 milliard tomman is granted to agri-infrastructural supporting by national credit fund. Some amounts of this budget will be charged for irrigating systems.

Of course we will lend 10-100 million tomman long-term loans to our qualified breeders and farmers.

“This ministry and the ministry of Energy have made an agreement of constructing the originated and subordinated nets, pressured irrigating systems in 1 400 000 ha farm lands”. This project is expected to be operated up to end of 1390.

Though increasing product`s prices, why Foreign exchange is still stable?!

Here by the writer analyses history of our foreign exchange within 32 years ago. He argues, our state controles by itself the rate of foreign Currency and it will authomatically damage our economical basis.

He identfys increasing prices of agricultural products up to 60 percent in 5 years ago, is asking why the rate of foreign Currency is still stabled?

It`s an expectation that by exectuion of Aiming Cooperative law, the price of energy sources, water expenses, foreign exchanges ei, USA dollar, will be increased so much.

Consequently our national goods Connot Compe with imported ones, so our national products

In the name of GOD
