

and Dr. Juan Fernando Moreno, board of director of “TWG” Company attended there and told speeches about genomics.

Dr. John schouten spoke about “genomic and the future of animal industry in the world” And Dr. Juan Fernando Moreno spoke about “sexing technology”.

Iran – France first Agriculture Summit

The first agriculture summit was held in attendance with Abbas Keshavarz Iranian Minister Asistant, and Patris de Laurence, France Agriculture Minister re presentative in Agriculture Ministry.

A. Keshavarz Said: Six Coopration documents in transition of technical knowledge in aquaculture, animal breeding, agronomy, exporting organic crops and importing new varieties of grapes, apples and pears.

He added: in fishery, the first aquaculture farm will inaugurate in Qeshm Island. This site will establish be cooprating and investing of Iran and France. And, both of countries will cooprate to establish herbs garden, flowers, mushroom, and greenhouse products.

He specified: We are looking for transition the knowledge some crops like corn, canola, weath, barly, sorgum and their specifications to drought, pests and diseases.

Castle Rock Company propensity to invest in agriculture and food industry of Iran

AtwodayseminarbetweenIranandFrancewasheldinAgriculture Ministry and 6 documents were signed about agriculture, animal husbandry, fishery, breeding and etc. In second day interviewed to Eng. Bahramy about this seminar and the results.

He said about the Castle Rock company, which this is an international company that has many branches in the world but the main office is in Paris. It`s activities are on banking investment, agriculture, industry and food industry.

To reply to this question that: why Castle Rock was invited to this seminar, Said: Eng. Hojati, Agriculture Minister met Stephan le Foll, the French Agriculture Minister last year. In this meeting French minister emphasized that the sanctions on agriculture are not acceptable. And on the other side Eng. Hojati told that we are both can cooprate in agronomy, gardening, seeds, fishery, animal husbandry, animal vaccines and food processing.

Gradual Development in Breeding, Genomic and food security in Iran

The Current Century that only 15 Years of it is passed, is the century of significant scientific developments and economic changes.

China, for example, and the other south – east countries that supply some of their foods from insects, snakes, scorpions and lizards, now are going to produce red meat (cow, sheep...) and Poultry.

Income increasing caused to more demand for qualified, healthy and organic foods. But, in the other hand water, soil, pastures and the wood sources are decreasing, so it is not possible to produce like the past centuries.

In milk, red meat, poultry and egg producing, we are faced to limited sources of inputs, forages and in balancing between the number of animals and the pastures. Therefore, we have to exploit superior breeds to achieve food security. By entering genomic cows and produce and increasing their sperms and offer to farmers, many changes occurred in animal husbandry and milk and meat production that decrease the costs.

Jahed Animal Inputs a governmental and national company for food security

The third annually summit Jahed Animal Inputs Company was held to survey and introduce new events in milk, meat, poultry and egg technologies. This company is governmental absolutely and its activities are to supply and balance the raw materials for animal and poultry producers.

According to economists, one of the government duties is to enhance the percentage of food security. And, Jahed Animal Inputs Company has done this function for 20 years, and has helped the producers in “Basic technologies” for animals and poultry. One of its main action is to transfer Genomic technology to Iran that can affect milk and meat production. By this way it enhanced the level of skills and knowledge about genomic matter.

In this summit Dr. John schouten, director general of (WWS) company from USA,

In the name of GOD
